

*The measure of our success is the mean by which we achieved it.
(Author unknown)*

Dear reader,

We are honored and pleased to present a 16th issue of journal, the second number in 2014. This number is a bit unusual, because in addition to many fine articles from the inner areas of Kinesiology, brings very nice sport figures, and an unusual proposal of getting energy from gravitational sources. It is only a small step forward in scientific Scylla and Charybdis, the journey through unknown areas of human knowledge, and through the labyrinths of human dilemmas embedded too often in the most primitive frames of authorities, violence or money. Freedom of knowledge, freedom of life and freedom of a man who has always the right to say: I do not agree and not so!, makes us human in the end. That is because science is there, no matter what fate awaited those free and intractable minds, sometimes indeed in the world with too many snakes, rats and poisons, but also in the world of happiness, love and knowledge. In the end, everyone takes of it what he can recognize as important and which can be further upgraded. If at all worthy as there is someone to snake venom, it does not mean it has to be our choice. Because it is not !! We are confident you will find interesting things in this issue and that will fill the cognitive interests, or at least touch on some of the great authors through their works. Try to reach them, though you will not have a direct financial benefit, pay will be mental, spiritual. And that is, you will admit, however, the most valuable. And on a path of knowledge, and even a possible success, whatever that may be, remember that it matters how you achieve that success. Moreover, it is the most important. And in that you are recognized.

*Mjera našeg uspjeha jest sredstvo kojim smo taj uspjeh postigli.
(Nepoznati autor)*

Dragi čitatelju,

Posebna nam je čast i zadovoljstvo predstaviti 16. primjerak časopisa, drugi broj u 2014.g. Ovaj broj je malo neobičan, jer osim mnoštva sjajnih članaka iz užeg kineziološkog područja donosi jako lijepu sportsku ilustraciju i jedan neobičan prijedlog načina dobivanja energije iz gravitacijskih izvora. To je samo jedan mali iskorak u znanstvene Scile i Haribde, u putovanje kroz nepoznate predjele ljudske spoznaje i kroz labirinte ljudskih dvojbi uklopljenih prečesto u najprimitivnije okvire vlasti, nasilja ili novca. Sloboda spoznaje, sloboda života i sloboda čovjeka koji ima uvijek pravo reći: Ne slažem se i nije tako !, čini nas ljudima u konačnici. Zato znanost i postoji, bez obzira kakva sudbina čekala te slobodne i neukrotive umove, ponekad zaista u svijetu s previše zmijske, štakora i otrova, ali isto tako i u svijetu sreće, ljubavi i saznanja. Na koncu, svatko uzima iz svega toga ono što može prepoznati kao važno i što može dodatno nadograditi. Ako je u svemu vrijedno što postoji to nekome zmijski otrov, to ne znači da mora biti i nama. Jer nije !! Uvjereni smo da ćete i u ovom broju časopisa pronaći zanimljivosti kojima ćete ispuniti spoznajne interese ili barem dotaknuti neke od sjajnih autora preko njihovih djela. Pokušajte, iako nećete imati direktnu materijalnu korist, isplatiti će vam se duševno. A to je, priznat ćete, ipak najvrijednije. I na toj stazi spoznaje, pa i mogućeg uspjeha, ma što to bilo, prisjetite se da nije svejedno kako ste taj uspjeh postigli. Naprotiv, to je najvažnije. I po tome ste prepoznati.
