Preliminary scientific communication

### Abstract

This article affirms an old idea of energy production under condition that energy has to be available to everybody. Maybe it is only an illusion, only an error, and an impossible dream, OK, it can be, but I think that seed is sown. Future will evaluate it. And of course, although it may not be seen immediately, it has enormous reflections in Kinesiology, as well as medicine, machinery, civil engineering, physics, space exploration, maritime studies, etc. etc, etc.

**Key words:** energy, free, beginning

### Introduction

Let me play a game. A game of exploration. And let me play a game. Game of joy. And let me play a game. Game of freedom. So, I played a game that includes exploration, joy and freedom. That is all.

### Methods

For start, middle and final phases I used a strongest tool that ever existed. A brain. And not only mine but primary brains (results, thinking, papers, ...), of many authorities across the world and across the history. Those brains are extraordinary tool, believe me.

It is literary impossible to name all of them on this piece of paper, so let me be excused, but all of them are my references. We have belt, and two weight on each side, so belt can go round by gravity force acting on weights. Weights change its position on limiter contact.

Everything is so simple. And finally, this is not *perpetuum mobile*, because it requires input energy – gravity.

### Idea

We are talking about usage of gravity force. In this moment I am not interested in factors of usefulness or similar mathematical constructions. I believe, someone will manage it quite good. Anyway, my calculations shows that it is possible to produce useful energy after we accept all system losses.

**Conclusion**

Product 'free' energy or not – that is a question !?

**References**

\* \* \* (from < - 5.000.000.000 years -> today). All people through human history that ever try to compose, assemble, invent, anything new.

**PROIZVODITI 'BESPLATNU' ENERGIJU, DA ILI NE - TO JE PITANJE !?**

**Sažetak**

Ovaj članak afirmira poznatu zamisao o proizvodnji energije pod uvjetom da je raspoloživa svakome. Možda je to samo tlapnja, samo pogreška, i nemoguć san, može biti, ali mislim da je sjeme posijano. Budućnost će sve vrednovati. I naravno, iako možda nije odmah vidljivo, ovo ima enormne refleksije u Kineziologiji, baš kao i u medicini, strojarstvu, građevini, fizici, istraživanju svemira, istraživanju mora, itd., itd., itd.

**Ključne riječi:** energija, sloboda, početak
